QUESTION 1

MULTIPLE CHOICE

An electrical contractor performing work on a 230 kV generation interconnect substation in Alabama must hold which classifications? (Choose two.)

- ☐ A AL Electrical Contractor (EC) license with no additional classification required for any voltage
- ☒ B AL Power Projects and Plants Contractor classification covering high-voltage generation plant work
- ☐ C Federal EIA-860 generator registration only, with no state electrical license needed
- ☐ D AL Transmission/Distribution Line Contractor classification when crossing public rights-of-way
- ☒ E Alabama Certificate of Authority issued by the Secretary of State for in-state entities performing contracting work

ANSWER B - E

WHY Power Projects and Plants work in Alabama is performed under the Power Projects and Plants Contractor classification, which covers generation plant and high-voltage associated work. Any entity performing contracting work in Alabama must also hold a Certificate of Authority from the Alabama Secretary of State. Transmission/distribution line work is a separate classification relevant only when line work crosses rights-of-way, not for the substation itself, and there is no state exemption for high-voltage generation work.

QUESTION 2

MULTIPLE CHOICE

Which of the following are acceptable forms of proof of financial responsibility for an Alabama Power Projects and Plants Contractor applicant? (Choose two.)

- ☒ **A** A surety bond written by a surety authorized to do business in Alabama
- ☐ **B** A personal guarantee signed only by the qualifying party without bonding
- ☒ **C** An irrevocable letter of credit from an Alabama-licensed bank in the amount required by the board
- ☐ **D** A verbal promise of payment from the project owner
- ☐ **E** Cash deposit or certificate of deposit assigned to the State Licensing Board for General Contractors

ANSWER A - C

WHY The Alabama State Licensing Board for General Contractors accepts a surety bond from an authorized surety, an irrevocable letter of credit from an Alabama-licensed bank, or a cash deposit/CD assigned to the Board as proof of financial responsibility. Personal guarantees and verbal promises are not acceptable substitutes.

QUESTION 3

SINGLE CHOICE

Who must pass the Alabama Power Projects and Plants Contractor trade examination in order for the company license to be issued?

- ☐ A Any one current employee of the applying company, regardless of ownership interest
- ☒ B The qualifying party designated by the applicant, whose experience is used to demonstrate qualification
- ☐ C The president of the company and the chief financial officer jointly
- ☐ D Only a master electrician licensed in the State of Alabama

ANSWER B

WHY Alabama contractor licensing requires the applicant firm to designate a qualifying party whose experience, examination results, and fitness are used by the Board to evaluate the application. The qualifying party must pass the trade exam for the classification requested.

QUESTION 4

SINGLE CHOICE

Which agency administers the Alabama Power Projects and Plants Contractor license?

- ☐ A Alabama Department of Labor, Licensing and Compliance Division
- ☒ B Alabama State Licensing Board for General Contractors
- ☐ C Alabama Public Service Commission, Utility Construction Bureau
- ☐ D Alabama Board of Electrical Contractors

ANSWER B

WHY Contractor classifications in Alabama, including Power Projects and Plants, are administered by the Alabama State Licensing Board for General Contractors under the Alabama General Contractors Law.

QUESTION 5

SINGLE CHOICE

When bidding a Power Projects and Plants scope as a subcontractor on an Alabama public utility project, which document must typically be furnished to evidence current licensure to the awarding authority before award?

- ☐ A A copy of the qualifying party's OSHA 30-hour card
- ☒ B A current certificate of licensure issued by the State Licensing Board for General Contractors
- ☐ C A letter from the bonding company listing the project only
- ☐ D A notarized affidavit of the company president alone

ANSWER B

WHY Public awarding authorities in Alabama require evidence of a current, active contractor license issued by the State Licensing Board for General Contractors. OSHA cards, bonding letters, and affidavits do not substitute for the license certificate itself.

QUESTION 6

SINGLE CHOICE

Which insurance coverage is required to be maintained continuously by an Alabama Power Projects and Plants Contractor as a condition of licensure?

- ☐ A General liability only, because workers' compensation is optional for construction employers
- ☒ B General liability insurance and, where applicable, workers' compensation insurance meeting Alabama statutory limits
- ☐ C Automobile liability only, since most plant work is performed on a single fixed site
- ☐ D Professional liability (errors and omissions) coverage in lieu of general liability

ANSWER B

WHY Alabama contractors must maintain general liability insurance and, when they have employees, workers' compensation insurance in accordance with Alabama law. Workers' compensation is not optional for construction employers with employees, and professional liability is not a substitute for the required general liability coverage.

QUESTION 7

SINGLE CHOICE

What is the standard license renewal cycle and continuing education requirement for an Alabama Power Projects and Plants Contractor?

- ☐ A Annual renewal with no continuing education required
- ☒ B Biennial renewal with the board-required hours of continuing education in approved courses
- ☐ C Five-year renewal with no continuing education required
- ☐ D Biennial renewal with mandatory NERC CEH credits only

ANSWER B

WHY Alabama contractor licenses issued by the State Licensing Board for General Contractors renew on a biennial cycle, and licensees must complete the board-required continuing education hours in board-approved courses prior to renewal. NERC CEH credits are a separate credentialing scheme and do not substitute for the state's CE requirement.

QUESTION 8

SINGLE CHOICE

Which activity is included within the scope of work of an Alabama Power Projects and Plants Contractor?

- ☐ A Installation of overhead 46 kV transmission lines outside the plant fence
- ☒ B Installation, maintenance, and repair of electrical and mechanical equipment within a power generating plant
- ☐ C Residential HVAC service work in single-family dwellings
- ☐ D Road and bridge construction on public rights-of-way

ANSWER B

WHY The Power Projects and Plants classification covers work on electrical and mechanical equipment associated with power generation facilities, such as generators, switchgear, controls, and balance-of-plant systems within the generating station. Transmission line work outside the fence is a different classification, residential HVAC is plumbing/HVAC scope, and road/bridge work is Heavy or Highway Construction.

QUESTION 9

SINGLE CHOICE

Which of the following is a recognized ground for disciplinary action against an Alabama Power Projects and Plants Contractor by the licensing board?

- ☒ **A** Misrepresentation on the license application or renewal documents
- ☐ **B** Filing a federal tax return one day late
- ☐ **C** Refusing to perform warranty work at no cost beyond the warranty period
- ☐ **D** Obtaining a separate electrical license in a neighboring state

ANSWER A

WHY Misrepresentation on applications, renewals, or other documents submitted to the Board is a statutory ground for suspension, revocation, or denial of a contractor license. Late tax filing, routine commercial disputes, and holding an out-of-state license are not, by themselves, disciplinary grounds for the Alabama license.
