QUESTION 1 SINGLE CHOICE

According to Colorado barber licensure requirements, what is the minimum age at which a person may apply for a barber license?

- ☐ A 16 years of age
- ☐ B 17 years of age
- ☒ C 18 years of age
- ☐ D 21 years of age

ANSWER C

WHY Under Colorado law, applicants for a barber license must be at least 18 years of age (and meet education/training and examination requirements). Options A, B, and D do not meet the statutory minimum age.

QUESTION 2 SINGLE CHOICE

Which of the following is the correct procedure for disinfecting a reusable metal clipper blade after each use?

- ☐ A Wipe the blade with a dry towel and return it to the drawer
- ☒ B Remove hair, immerse the blade in an EPA-registered disinfectant for the manufacturer's recommended contact time, then rinse (if required) and dry
- ☐ C Spray the blade with perfume to mask odors between clients
- ☐ D Soak the blade overnight in plain tap water

ANSWER B

WHY Reusable clipper blades must be cleaned of debris and then immersed in an EPA-registered disinfectant for the full contact time stated on the product label. Wiping with a dry towel (A), spraying with perfume (C), or soaking in plain water (D) do not achieve disinfection and violate Colorado sanitation standards.

QUESTION 3

SINGLE CHOICE

A client tells you they have open sores or inflamed skin on the scalp and neck area. What should the barber do?

- ☐ A Proceed with the haircut but avoid the affected area with the comb only
- ☒ B Refuse to perform the service until the condition is no longer contagious or the client provides a physician's release, and refer the client to a medical professional when appropriate
- ☐ C Use stronger chemicals to sterilize the area before service
- ☐ D Apply a hot towel to the sores to open the pores before shaving

ANSWER B

WHY Barbers must not perform services over inflamed, broken, or contagious skin conditions because of the risk of spreading infection to the client, the barber, and other clients. The correct action is to decline the service and refer the client to a physician; continuing the service (A), attempting to chemically treat the area (C), or applying heat to open lesions (D) are all improper.

QUESTION 4

SINGLE CHOICE

When performing a standard scissors-over-comb haircut, the comb should be held so that:

- ☐ A The teeth point upward away from the scalp
- ☐ B The comb remains stationary while the scissors do all the moving
- ☒ C The teeth lift the hair away from the scalp while the scissors glide along the spine of the comb to cut the protruding hair to a uniform length
- ☐ D The comb is held flat against the scalp with no lift to keep the hair the same length throughout

ANSWER C

WHY In a scissors-over-comb technique, the comb lifts the hair outward from the scalp to establish the length and the scissors slide along the spine of the comb, cutting the hair that protrudes through the teeth. The other options describe incorrect comb positions or a stationary comb, which would not produce a graduated cut.

QUESTION 5

SINGLE CHOICE

Before performing a straight-razor shave on a client, the barber must do which of the following?

- ☐ A Test the blade on the back of their own hand to ensure sharpness
- ☒ B Inspect the razor for a sound blade and sound handle, sanitize it properly, and then palpate the client's face to identify any contraindications before lathering
- ☐ C Skip lather if the client's beard is short
- ☐ D Use the same razor blade on the next client without re-sanitizing if no visible blood was drawn

ANSWER B

WHY Colorado sanitation rules require that straight razors be inspected for integrity (blade and handle), properly sanitized between uses, and that the barber perform a tactile assessment of the face (palpation) to detect lumps, blemishes, or skin conditions before applying lather. Testing on the barber's hand (A), skipping lather (C), or reusing an unsanitized blade (D) violate both safety and sanitation standards.

QUESTION 6

SINGLE CHOICE

Which level of instrument processing is required for items that penetrate the skin or come into contact with broken skin?

- ☐ A Sanitization only
- ☒ B Cleaning followed by sterilization (such as an autoclave) between uses
- ☐ C Wiping with a dry cloth
- ☐ D Rinsing in warm water only

ANSWER B

WHY Instruments that may penetrate the skin or contact broken/non-intact skin must be cleaned and then sterilized between uses; in barbershops this typically means using a steam autoclave or other sterilization method registered for that purpose. Sanitization (A) or simple wiping/rinsing (C, D) is insufficient for items that break the skin barrier.

QUESTION 7

SINGLE CHOICE

The visible part of the hair that is shaped or cut by the barber is called the:

- ☐ A Hair follicle
- ☐ B Hair root
- ☒ C Hair shaft
- ☐ D Hair bulb

ANSWER C

WHY The hair shaft is the visible portion of the hair that extends above the skin surface and is the part that barbers cut and style. The follicle (A), root (B), and bulb (D) are structures beneath the skin that anchor and produce the hair but are not the visible strand.

QUESTION 8

TRUE FALSE

Colorado barbershops are required to display the current shop license and the license of each working barber in a location visible to the public.

- ☒ A True
- ☐ B False

ANSWER A

WHY True. Colorado licensure rules require barbershops to display the establishment license and each individual barber's current license so the public can verify them. Failure to display licenses is a violation that can result in disciplinary action.

QUESTION 9

SINGLE CHOICE

Under Colorado barber licensure rules, what is the minimum amount of formal education, in clock hours, that an applicant for a barber license must complete before being eligible to apply for licensure?

- ☐ A 500 hours
- ☐ B 1,000 hours
- ☒ C 1,500 hours
- ☐ D 2,000 hours

ANSWER C

WHY Colorado requires applicants for a barber license to complete a minimum of 1,500 clock hours of training at a board-approved barber program before they are eligible to sit for the examination and apply for licensure.
