What this is

9 practice questions for Colorado Office of Barber and Cosmetology Licensure UKNE2Z9V , each with its answer key and an explanation. Answer a question before you read its key — the explanation is worth more once you have committed.

If something looks wrong

Send us three things and we will check it:

- the exam code, UKNE2Z9V
- the question number
- the email address on your order

Write to **support@mometrix.net**. We reply within one business day.

QUESTION 1

MULTIPLE CHOICE

Which of the following are acceptable methods for disinfecting hairstyling tools and implements between clients in a Colorado cosmetology establishment? (Choose two.)

- ☐ A Wiping implements with a clean, dry towel
- ☒ B Completely immersing non-porous implements in an EPA-registered disinfectant according to manufacturer directions
- ☐ C Spraying porous implements such as brushes with disinfectant and allowing them to air dry
- ☒ D Using an autoclave or UV sterilizer on metal implements after proper cleaning

ANSWER B - D

WHY Acceptable disinfection of non-porous implements requires complete immersion in an EPA-registered disinfectant following the product's contact time and dilution directions (B). UV sterilizers and autoclaves are also recognized methods for metal implements once they have been cleaned (D). Wiping with a dry towel does not disinfect (A), and spraying porous items like brushes does not achieve proper saturation and contact time (C).

QUESTION 2

MULTIPLE CHOICE

Which of the following items must be displayed at a licensed Colorado hairstyling establishment or workstation? (Choose two.)

- ☒ A The original or current renewal license certificate for each licensed professional
- ☐ B A valid government-issued photo ID for each client receiving services
- ☒ C A copy of the most recent inspection report or sanitation log as required by the Department
- ☐ D The establishment's business credit card on file

ANSWER A - C

WHY Colorado hairstylists and establishments are required to display current licenses and any inspection or sanitation documentation issued by the Office of Barber and Cosmetology Licensure so the public and inspectors can verify compliance (A and C). Client photo IDs and business credit card information are not required to be displayed (B and D).

QUESTION 3

TRUE FALSE

True or False: If a hairstylist accidentally nicks a client and blood is drawn, the implement involved must be removed from service, cleaned, and disinfected with an EPA-registered disinfectant before being used on another client.

☒ **A** True☐ **B** False**ANSWER A**

WHY True. Any tool that comes in contact with blood or other potentially infectious materials must be considered contaminated, removed from use, thoroughly cleaned, and then disinfected with an EPA-registered disinfectant following the product's instructions before reuse. Single-use items must be discarded in a proper sharps/container waste receptacle.

QUESTION 4

SINGLE CHOICE

Under Colorado law, which of the following services is within the scope of practice of a licensed hairstylist?

☒ **A** Performing chemical hair relaxers and permanent waving on the hair and scalp☐ **B** Performing microdermabrasion☐ **C** Administering Botox injections☐ **D** Performing laser hair removal**ANSWER A**

WHY Colorado hairstylists are licensed to perform services on the hair and scalp, including chemical texture services such as relaxers and permanent waves (A). Esthetic and medical procedures such as microdermabrasion, Botox injections, and laser hair removal fall outside the hairstylist scope and require separate esthetician or medical licensure (B, C, D).

QUESTION 5

SINGLE CHOICE

Before performing a chemical relaxer service, a stylist should first assess the client's hair and scalp for which of the following conditions?

- ☒ **A Presence of abrasions, irritation, or open lesions on the scalp**
- ☐ B The client's favorite hair color brand
- ☐ C The expiration date of the stylist's license
- ☐ D The client's preferred appointment day

ANSWER A

WHY A proper pre-service analysis includes examining the scalp for abrasions, irritation, inflammation, or open lesions, because applying chemicals over compromised skin can cause burns, absorption into the bloodstream, or worsening of the condition (A). Client color preferences (B), the stylist's license date (C), and scheduling preferences (D) are not part of the required hair and scalp analysis prior to a chemical service.

QUESTION 6

SINGLE CHOICE

When applying a chemical relaxer, which protective measure is required to reduce the risk of product irritation or burns?

- ☐ A Applying a protective base cream only to the scalp after the relaxer has been processed
- ☐ B Performing a patch test only when the client requests it
- ☒ **C Applying a protective base cream to the scalp and along the hairline and ears before the relaxer is applied**
- ☐ D Skipping the protective base if the client has had a relaxer service within the past six months

ANSWER C

WHY A protective base (often petroleum-based) must be applied to the scalp, hairline, and ears before the relaxer is applied in order to shield the skin from direct chemical contact and reduce the risk of burns or irritation (C). It must not be applied after processing (A); patch testing is standard for many chemical services regardless of client request (B); and prior relaxer history does not eliminate the need for proper protection (D).

QUESTION 7

SINGLE CHOICE

Which of the following is the correct sanitation practice for a reusable client cape in a Colorado hairstyling establishment?

- ☐ A Use the same cape on multiple clients throughout the day without laundering
- ☒ B Use a freshly laundered or properly disinfected cape for each client
- ☐ C Wipe the cape with a damp cloth between clients
- ☐ D Only launder capes once per week

ANSWER B

WHY Reusable capes are considered multi-use items that must be laundered or properly disinfected and a fresh one provided for each client to prevent cross-contamination (B). Reusing without laundering (A), wiping with a damp cloth (C), or laundering only weekly (D) do not meet sanitation requirements.

QUESTION 8

SINGLE CHOICE

A hairstylist working in a Colorado licensed establishment must display:

- ☐ A Only their certificate of completion from cosmetology school
- ☒ B Their current Colorado hairstylist license certificate in a conspicuous place at their workstation
- ☐ C A business card with their personal cell phone number
- ☐ D A note that they are licensed in another state

ANSWER B

WHY Licensed hairstylists in Colorado must display their current license certificate in a place where it is readily visible to the public at their workstation (B). School certificates (A) and personal business cards (C) are not a substitute. Practicing under another state's license is not permitted in Colorado (D).

QUESTION 9

SINGLE CHOICE

Which of the following is the correct hand hygiene practice for a hairstylist between clients?

- ☒ **A** Wash hands with soap and warm water, or sanitize with an alcohol-based hand rub, before and after each service
- ☐ **B** Rinse hands in the shampoo bowl water between clients
- ☐ **C** Wipe hands on a towel used throughout the day
- ☐ **D** Only handwash at the start of the workday

ANSWER A

WHY Proper hand hygiene requires washing hands with soap and warm water or using an alcohol-based hand sanitizer before and after every client service to prevent cross-contamination (A). Reusing bowl water (B), wiping on a shared towel (C), or washing only at the start of the day (D) do not meet sanitation requirements.
