**QUESTION 1** MULTIPLE CHOICE

Which two actions are required to properly disinfect reusable manicure tools after each service? (Choose two.)

**A** **Clean the tools before placing them in an EPA-registered disinfectant**

B Store the tools wet in a closed container until the next client

**C** **Wear appropriate personal protective equipment while handling contaminated tools**

D Immediately reuse the tools if they look clean

ANSWER **A** · **C**

WHY Contaminated tools must first be cleaned and then disinfected using an appropriate EPA-registered product. Appropriate personal protective equipment must be worn while handling contaminated items. Reusable tools should not be stored wet or reused without completing the required disinfection process.

**QUESTION 2** MULTIPLE CHOICE

Which two steps are part of a standard manicure service? (Choose two.)

**A** **Shaping the free edge with a nail file or emery board**

**B** **Removing all visible dust from the nails and surrounding skin**

C Applying a coating intended for a different professional body art procedure

D Avoiding hand hygiene to preserve product adhesion

ANSWER **A** · **B**

WHY A standard manicure includes shaping the nails and removing dust and debris from the nail surface and surrounding skin. The other options are unrelated or violate appropriate service and hygiene practices.

mometrix.net

**QUESTION 3** TRUE FALSE

Hands must be washed with soap and water before and after each nail service.

**A** **True**

B False

**ANSWER** **A**

**WHY** True. Proper hand hygiene is required before and after every service to reduce the risk of infection transmission.

**QUESTION 4** SINGLE CHOICE

Before beginning a nail service, what should the nail technician assess to help determine whether the service is appropriate for the client?

**A** **The client's nails, skin condition, and any contraindications**

B Only the client's preferred nail color

C The technician's schedule for the rest of the day

D Only the length of the client's appointment

**ANSWER** **A**

**WHY** A qualified consultation includes assessing the condition of the nails and skin and identifying any contraindications before performing the service.

**QUESTION 5** SINGLE CHOICE

What is the safest way to discard a disposable nail file after it has been used on a client?

**A** **Place it in a covered, lined waste container immediately after use**

B Wash it and place it in the tool disinfectant

C Keep it in the workstation drawer for the next client

D Place it in a labeled container of clean water

**ANSWER** **A**

**WHY** Single-use items that cannot be properly cleaned and disinfected should be discarded immediately in a covered, lined waste container.

**QUESTION 6** SINGLE CHOICE

Before applying nail polish, which preparation is appropriate?

**A** **Ensure the nail plate is clean, dry, and free of visible oils or debris**

B Apply polish directly over lotion or cream

C Soak the nail plate in water immediately before polishing

D Skip surface preparation to improve polish adhesion

**ANSWER** **A**

**WHY** The nail plate should be clean, dry, and properly prepared before polish application. Oils, moisture, lotion, and debris can interfere with adhesion and service quality.

mometrix.net

**QUESTION 7** SINGLE CHOICE

What is the purpose of gently pushing back the proximal nail fold during a manicure?

**A** **To expose and clean the nail fold area before finishing the service**

B To permanently remove the cuticle

C To thin the natural nail plate

D To accelerate polish drying

**ANSWER** **A**

**WHY** The proximal nail fold is gently softened and pushed back to clean and prepare the nail area. The living tissue must not be cut, and this step does not thin the nail plate or accelerate drying.

**QUESTION 8** SINGLE CHOICE

What should a nail technician do before applying artificial nail enhancements?

**A** **Inspect the natural nails and prepare them according to the product manufacturer's directions**

B Apply the enhancement over artificial nails that have not been removed

C Skip cleansing the nail plate because enhancement products adhere to oil

D Begin application without checking the client's service history

**ANSWER** **A**

**WHY** The natural nails must be inspected and properly prepared, including cleansing and product-specific surface preparation, before artificial nail enhancement application. Manufacturer directions and the client's service history should also be considered.

**QUESTION 9** SINGLE CHOICE

A client arrives with redness, swelling, and tenderness around a fingernail. What should the nail technician do?

**A** **Do not perform the nail service and recommend appropriate professional medical evaluation**

B Proceed with the manicure as long as the client wants it

C Cover the area with polish and continue the service

D Use a stronger disinfectant over the affected area and continue

**ANSWER** **A**

**WHY** Signs of redness, swelling, and tenderness can indicate an infection or other condition that may make a nail service inappropriate. The service should be declined and the client should be advised to seek appropriate medical evaluation.
